

6th Annual Williamsport WW II Weekend

October 11, 12, 13, 2013

AMMO POLICY

1. All Blank Ammo brought to the event will be in metal boxes or a closed container.
2. All units will have a designated safety officer who will inspect their unit's respective blank ammo Friday night and/or Saturday morning prior to the weapons demonstration/battle scenario.
3. After the officers meeting, prior to deployment for the weapons demonstration/tactical, all ammo-designated officers from units will concur with each other that in fact they have checked their units respective blank ammo.
 - A. All ammo taken to events should be in a metal ammo box or a closed container, and when you leave the event go home follow the same manner, no loose rounds in your gear, bags, or boxes, no preloaded mags., and when you get back home keep them in that box that way they won't get mixed in with real rounds. This is very simple for people to do and if ammo is in an ammo box it's a better legal way to transport it that way the Police or any aware citizens will not have cause for alarm seeing hundreds of rounds in a trunk of a car, remember some of these rounds look real. I know most people who have a Right to Carry License will have the real rounds in the car, and again this will help real rounds from being mixed in with the Blanks.
*There will be exemptions for ammo belts.
 - B. Every unit will have a designated safety officer or someone to do it whose job it will be when the re enactors get to the event to check the ammo ASAP. (Do I need to mention new re enactors who are going to their first event?) Besides the officers meeting there should be an ammo officers meeting were all the designated officers will concur with each other that they have checked their unit's ammo and/or put ammo checked on your registration card. or just check the ammo upon registration and stamp your card with inspected ammo card. For those who do Field Police you might want to take this as your most important job checking registration cards with ammo checked.
 - C. No more body shots or in your face pointing with guns aim to the side or above or below. This might also decrease the number of facial injuries due to powder burns and or injury from wood tipped blanks or dirt lodged in the barrel or bad crimps. *Exemptions BFONGS, Planes, Tanks, MGS, Subguns, pyro stuff. This Policy does not include Rounds for Tanks or anti tank guns as they use gunpowder or a gas system, Nor does this policy effect pyro use or inert Bazooka's, or any other Pyrotechnic.
